Case Study

Localization of Clinical Support Databases Healthcare IT Support Company

Client's Business Influence

Clean and easily accessible electronic patient records saves the time of Healthcare professionals and speedup the healthcare facilities.

Project Scope:

One of the healthcare IT support company approached us with the requirement of localization of their clinical support database for its client in Germany.

Methodology/ Approach:

- The assignment taken care by the experienced native German linguistic medical experts to make sure the localized content met the client expected terminology and formats.

- We have used language memory translation tools and custom in-house tool to identify & lock the repeated words which are not requiring again translation.

- Complete localized content delivered to client after quality confirmation from the review team.

- Post-delivery feedback and updates addressed by the review team.

- Final Signoff.
